

Content

Technical Field 1:

Influence of process technology on the manufacture of market-oriented cements

H.-M. Ludwig	Influence of process technology on the manufacture of market-oriented cements	2
A. Ehrenberg, E. Lang, J. Geiseler	Slag-containing cements with bimodal particle size distribution	25
W. Dienemann, M. Tax	Development and production of cements for concrete products	33
S. Lindner, H.-M. Ludwig, H. Möller, H.-J. Wächtler	Production and properties of CEM II/B-M Portland composite cements	37
W. van Loo	A rapid-hardening blast-furnace slag cement	42
J. Stark	Production and use of slag-containing NA (low alkali) cements	46
D.P. Bentza, C.J. Haecker, X.P. Fenga, P.E. Stutzman	Prediction of cement physical properties by virtual testing	53
S. Puntke, E. Schäfer, Ch. Schneider	Characterisation of the reactivity of cement constituents	63
A. K. Chatterjee	Blended cements and their importance for the Indian market	69
P. Lörke	Sulphoalite-containing Portland cement clinkers for high performance cements	76
J. Unsin	Development and production of environmentally acceptable shotcrete cements	88

Technical Field 2:

Comminution technology

W. Stoiber	Comminution technology and energy consumption	102
P. Clemens	Effective automation of closed circuit bucket elevator mills for cement	116
D. Espig, V. Reinsch, W. Längricht, T. Meißner	Advantages of computer-based mill audits and simulation using selected cement grinding plants	123
O. Jung, E. Jelito	Upgrading vertical roller mills	135
K.C. Narang, G. Fenelon, H.-U. Schäfer	Economical and ecological cement production by using highly flexible grinding systems	140
M. Davis, I. Engeln, T. Harzt	Experiences with the so far biggest Polysius roller mill for granulated blast furnace slag at St. Lawrence Cement in Camden, New Jersey	147
J. Hilger, S. Strasser	New cement grinding plant with VSK separator at Rohrbach Zement in Dotternhausen	153
B. Böhner, R. Schöpe	Operating experience with different wear protection designs for high-pressure roller mills	162
G.B. Auxilia	Ten years of Horomill operation confirm our 1993 vision	172
Ch. Gierga	Intelligent impact crusher technology in primary crushing operations	181

Technical Field 3:**Burning techniques**

U. Gasser	Eight years of progress in burning technology	194
K.H. Kasch	Experiences with the FLS calciner at the Lengerich plant	212
N. Bodendiek, V. Hoenig	Studies of the operating behaviour of precalcining plants	216
E.P. Axelsen, L.-A. Tokheim, D. Bjerketvedt	Effect of alternative fuel properties on NO _x reduction	221
F. Delcour	Experiment with the new CLE precalciner plant at the CBR cement works in Lixhe	235
P. Künne	Operating experience with refractory materials in precalciner plants	240
H. Schöffmann, M. Weichinger	Practical capability of different CI bypass systems	246
R. Cunningham, R. Lund	Increasing capacity by 35 % at Irish Cement's Limerick kiln	252
G. Locher, H. Klein	Mathematical modelling of the cement clinker burning process	259
W. Claus, T. Kolbe	Long-term operating experience with the ORC plant for low temperature power generation at the Lengfurt works	264
P. Scherr, P. Wranik, H.K. Fleck	Works development plan for a cement works	273
M. Geith, C. Majcenovic, A. Wiry	Special impregnation of alumina bricks to increase the alkali resistance	280
G.E. Gonçalves, A. Wajdowicz, L. Gontijo	The outlook for cement rotary kiln refractories due to the intensiv use of alternative fuels	288
H.-J. Klischat, H. Liever	Refractory innovations for cement kilns using economic fuels	300
S. Pal	Mathcement®-PYRO, a mathematical model to establish heat, gas and mass balance in the pyro processing section of modern cement plants	307

Technical Field 4:**Use of secondary materials**

A. Scheuer	Utilization of alternative fuels and raw materials (AFRs) in the cement industry	322
A. Harting	Quality control measures in the production and use of solid secondary fuels	338
V. Werner, D. Rose	Progress in the gasification of coarse secondary fuels in the cement industry	344
J.O. Haugom, K.P. Christensen	HOTDISC installation at Norcem A.S, Kjøpsvik: project realization and operational experience	348
M. Pech, G. Douillet	Operational experience in co-incineration of animal meal in cement kilns	352
A. Takx	Sewage sludge as a secondary fuel and raw material at ENCI	357
A. Wolter, G. Locher, J. Geiseler	Blast furnace slag (BFS) as a raw materials substitute for clinker burning	361
M. Oerter	Effects of the use of secondary materials on emissions in clinker production	368
G. Kirchner	Effects of the use of secondary materials on the environmental compatibility of the product	372
R. Bolwerk	Waste management and environmental protection by the use of waste fuels in the cement production	380

Technical Field 5:**Process technology and information management**

A. Garza, H. Bolio, G. Palacios	Plant engineering an technology, information management utilization	388
H.-P. Heider	Comparison between centralised and decentralised electrical equipment in the case of a cement mill	407
F. Vallée	Project experience with the introduction of an automated dispatch system	411
H. Würmseher, H. Fleck, B. Wiegel	Maintenance as a strategic factor in business	414
E. Klaiß	Management of maintenance	417
Y. Yildiz	Maintenance – lever for excellency in cement manufacturing	421
B. von Harten	Process-oriented maintenance for the cement industry	425
J.W. Davis, A.H. Pasman	Increasing profits through improved asset utilization in cement manufacturing operations	428
F. Schütz	Economical compressed air units in cement works	437
S. Baetzner	Operating experience with a laboratory information and management system (LIMS) at Anneliese Zementwerke AG	442
H. Bogdanski	From the horizontal screw conveyor pump to the vertical screw conveyor pump – a necessary stage of development	445
K. Hormann	Integrated management system at HeidelbergCement	449
B. Pagenkemper	Cement packaging – state of the art today	454

Technical Field 6:**Sustainability and cement production**

H.O. Gardeik	Sustainability and cement manufacture	472
P. Scur	NO _x reduction in the cement industry	479
S. Schäfer, V. Hoenig	Effects of process technology on the behaviour of mercury in the clinker burning process	484
M. Deussner	SO ₂ reduction in the cement industry	489
V. Hoenig, M. Müller-Pfeiffer	Contribution of a cement works to the air pollution situation in its vicinity	493
V. Hoenig, M. Schneider	CO ₂ reduction in the cement industry	499
B. Haegermann	The cement industry sustainability initiative within the World Business Council for Sustainable Development	506
M. Basten	Investment, raw materials and nature conservation: sustainable development in the case of the cement industry	514
H. Bartels	Sustainability and cement production from the trade union point of view	518
